The public distribution system, which provides food at low prices, is subject if vital concern. There is a growing realization that though Pakistan has enough food to feed its masses three square meals a days, the monster of starvation and food insecurity continues to haunt the poor in our country.

Increasing the purchasing power of the poor through providing productive employment leading to rising income, and thus good standard of living is the ultimate objective of public policy. However, till then, there is a need to provide assured supply of food through a restructured more efficient and decentralized public distribution system (PDS).

Although the PDS is extensive- it is one of the largest such systems in the world - it has yet to reach the rural poor and the far off places. it remains an urban phenomenon, with the majority of the rural poor still out of its reach due to lack of economic and physical access. The poorest in the cities and the migrants are left out, for they generally do not possess ration cards. The allocation of PDS supplies in big cities is larger than in rural areas. In view of such deficiencies in the system, the PDS urgently needs to be steam lined. In addition, considering the large food grains production combined with food subsidy on one hand and the continuing slow starvation and dismal poverty of the rural population on the other, there is strong case for making PDS target group oriented

The growing salaried class is provided job security, regular income, and %age insulation against inflation. These gains of development have not percolated down to the vast majority of our working population. If one compares only dearness allowance to the employees in public and private sector and looks at its growth in past few years. The rising food subsidy is insignificant to the point of in equality. The food subsidy is a kind of D.A to the poor, the self-employed and those in the organized sector of economy. However, what is most unfortunate is that out of the large budget of the so-called food subsidy, the major part of it is administrative cost and wastages. A small portion of the above budget goes to real consumer and even lesser portion to the poor who are in real need.

It is true that subsidies should not become a permanent feature, except for the destitute, disabled widows and the old. It is also true that subsidies often create a psychology of dependence and hence is habit-

forming, killing the general initiative of the people. By making PDS target group oriented, not only the poorest and neediest would be reached without additional cost, but it will actually cut overall costs incurred on large cities and for better off localities. When the food and food subsidy are limited the rural and urban poor should have the priority in the PDS supplies. The PDS should be closely linked with PDS should be closely linked with programs of employment generation and nutrition improvement.

176. What according to the passage is the main concern about the PDS?
- It has not been able to develop confidence in the people at large
  - It has not been able to utilize the entire food grains stock available
  - It has effectively channelized the food grains to all sectors.
  - It has not been able to provide sufficient food to the poorer section of the society
177. What should be an appropriate step to make the PDS effective?
- To Make it target group oriented
  - To increase the amount of food grains per ration card
  - To decrease the allotment of food grains to urban sector
  - To reduce administrative cost
178. Which of the following, according to the passage, is compared with dearness allowance?
- Food for work program
  - Unemployment allowance
  - Food subsidy
  - Procurement price of food grains
179. Food subsidy leads to which of the following?
- Sense of insecurity
  - Increased dependence
  - Shortage of food grains
  - Decrease in food grains production
180. What according to the passage, would be the outcome of making the would PDS target Group Oriented
- It will abolish the imbalance of urban and rural sector
  - It will remove poverty.
  - It will give food to the poorest without additional cost.
  - It will motivate the target group population to work more.
